

# A bird's-eye view of school attendance and absenteeism:

**Moving from fragmentation to reconstruction**

**Christopher A. Kearney, Ph.D.**  
**University of Nevada, Las Vegas**

# Bird's-eye harmonies

## Global issue

School attendance problems are an international phenomenon, with 17.8% (262 million) of youth out of school worldwide (*UNESCO, 2018*).

## Complex population

Symptoms, risk factors, behaviors, and types of school attendance problems are fluid, heterogeneous, and interwoven across multiple ecological levels.

## Integration with schools

Attempts to promote school attendance and ameliorate school absenteeism could involve close coordination with school officials and their service delivery systems.

## Adaptations to the future

Future rapid changes in education and technology may mean reconfiguring some traditional approaches in the field.

# Pieces of the puzzle: The past decade

## Expanded international focus

Growth of clinical and research work across different continents

## Multiple stakeholders

Increased involvement of laypersons, parents, students, and different agencies

## Big data

Use of sophisticated statistical analyses and predictive analytics to examine large-scale patterns

## Risk factors via ecological levels

Child-, parent-, family-, peer-, school-, community-, and legislative, global, and related factors across different spheres of influence

## Interdisciplinary focus

Celebrating the diversity of researchers and school and mental health professionals involved in this area

**Moving ahead with the puzzle pieces**  
**Into the great beyond**

# A professional journey

## Functional

### Clinically-oriented

A focus on individual cases in a clinical setting, with particular attention to circumscribed variables and contexts within a prescriptive treatment approach.

*Kearney & Silverman (1996)*

## Interdisciplinary

### Contextual-oriented

An understanding that many different contextual factors influence children with school attendance and their families, particularly youth not referred to clinicians or mental health agencies.

*Kearney (2008)*

## Response to Intervention

### School-oriented

A desire to integrate clinical research work with school-based contexts and an understanding that behavior, academics, and life skills are interwoven constructs.

*Kearney & Graczyk (2014)*

## Multi-tiered system of supports

### Service delivery-oriented

Moving toward full integration into blended models of service delivery in schools, with an eye toward a holistic approach to addressing students with complex needs at multiple levels.

*Kearney & Graczyk (under review)*

# Integrated multi-tiered system of supports

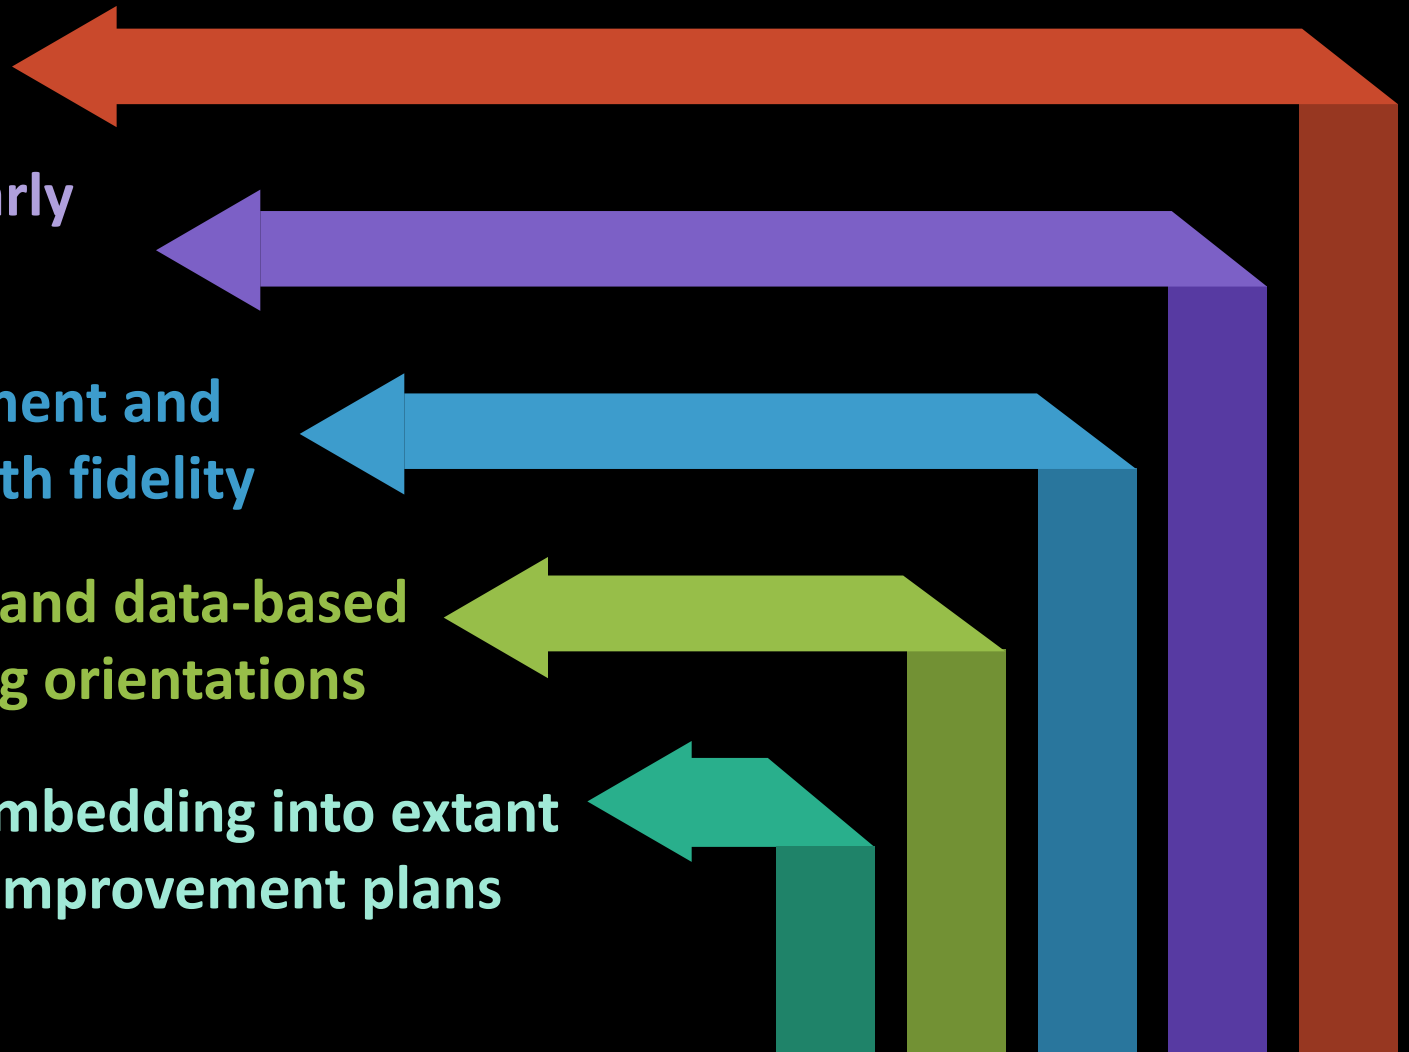

Focus on prevention and a tiered continuum of supports

Regular screenings and early warning systems

Evidence-based assessment and intervention practices with fidelity

Problem-solving and data-based decision-making orientations

Natural embedding into extant school improvement plans

**Response to Intervention model**  
*Kearney & Graczyk (2014)*

**Tier 3 Intervention - Intensive**

Expanded Tier 2 interventions, Alternative educational programs and schools, Parent/family involvement strategies, Specialized programs, Intensive case study and management, Second chance programs

Severe absenteeism  
5-10% of students

Increasing severity of absenteeism  
and intervention intensity

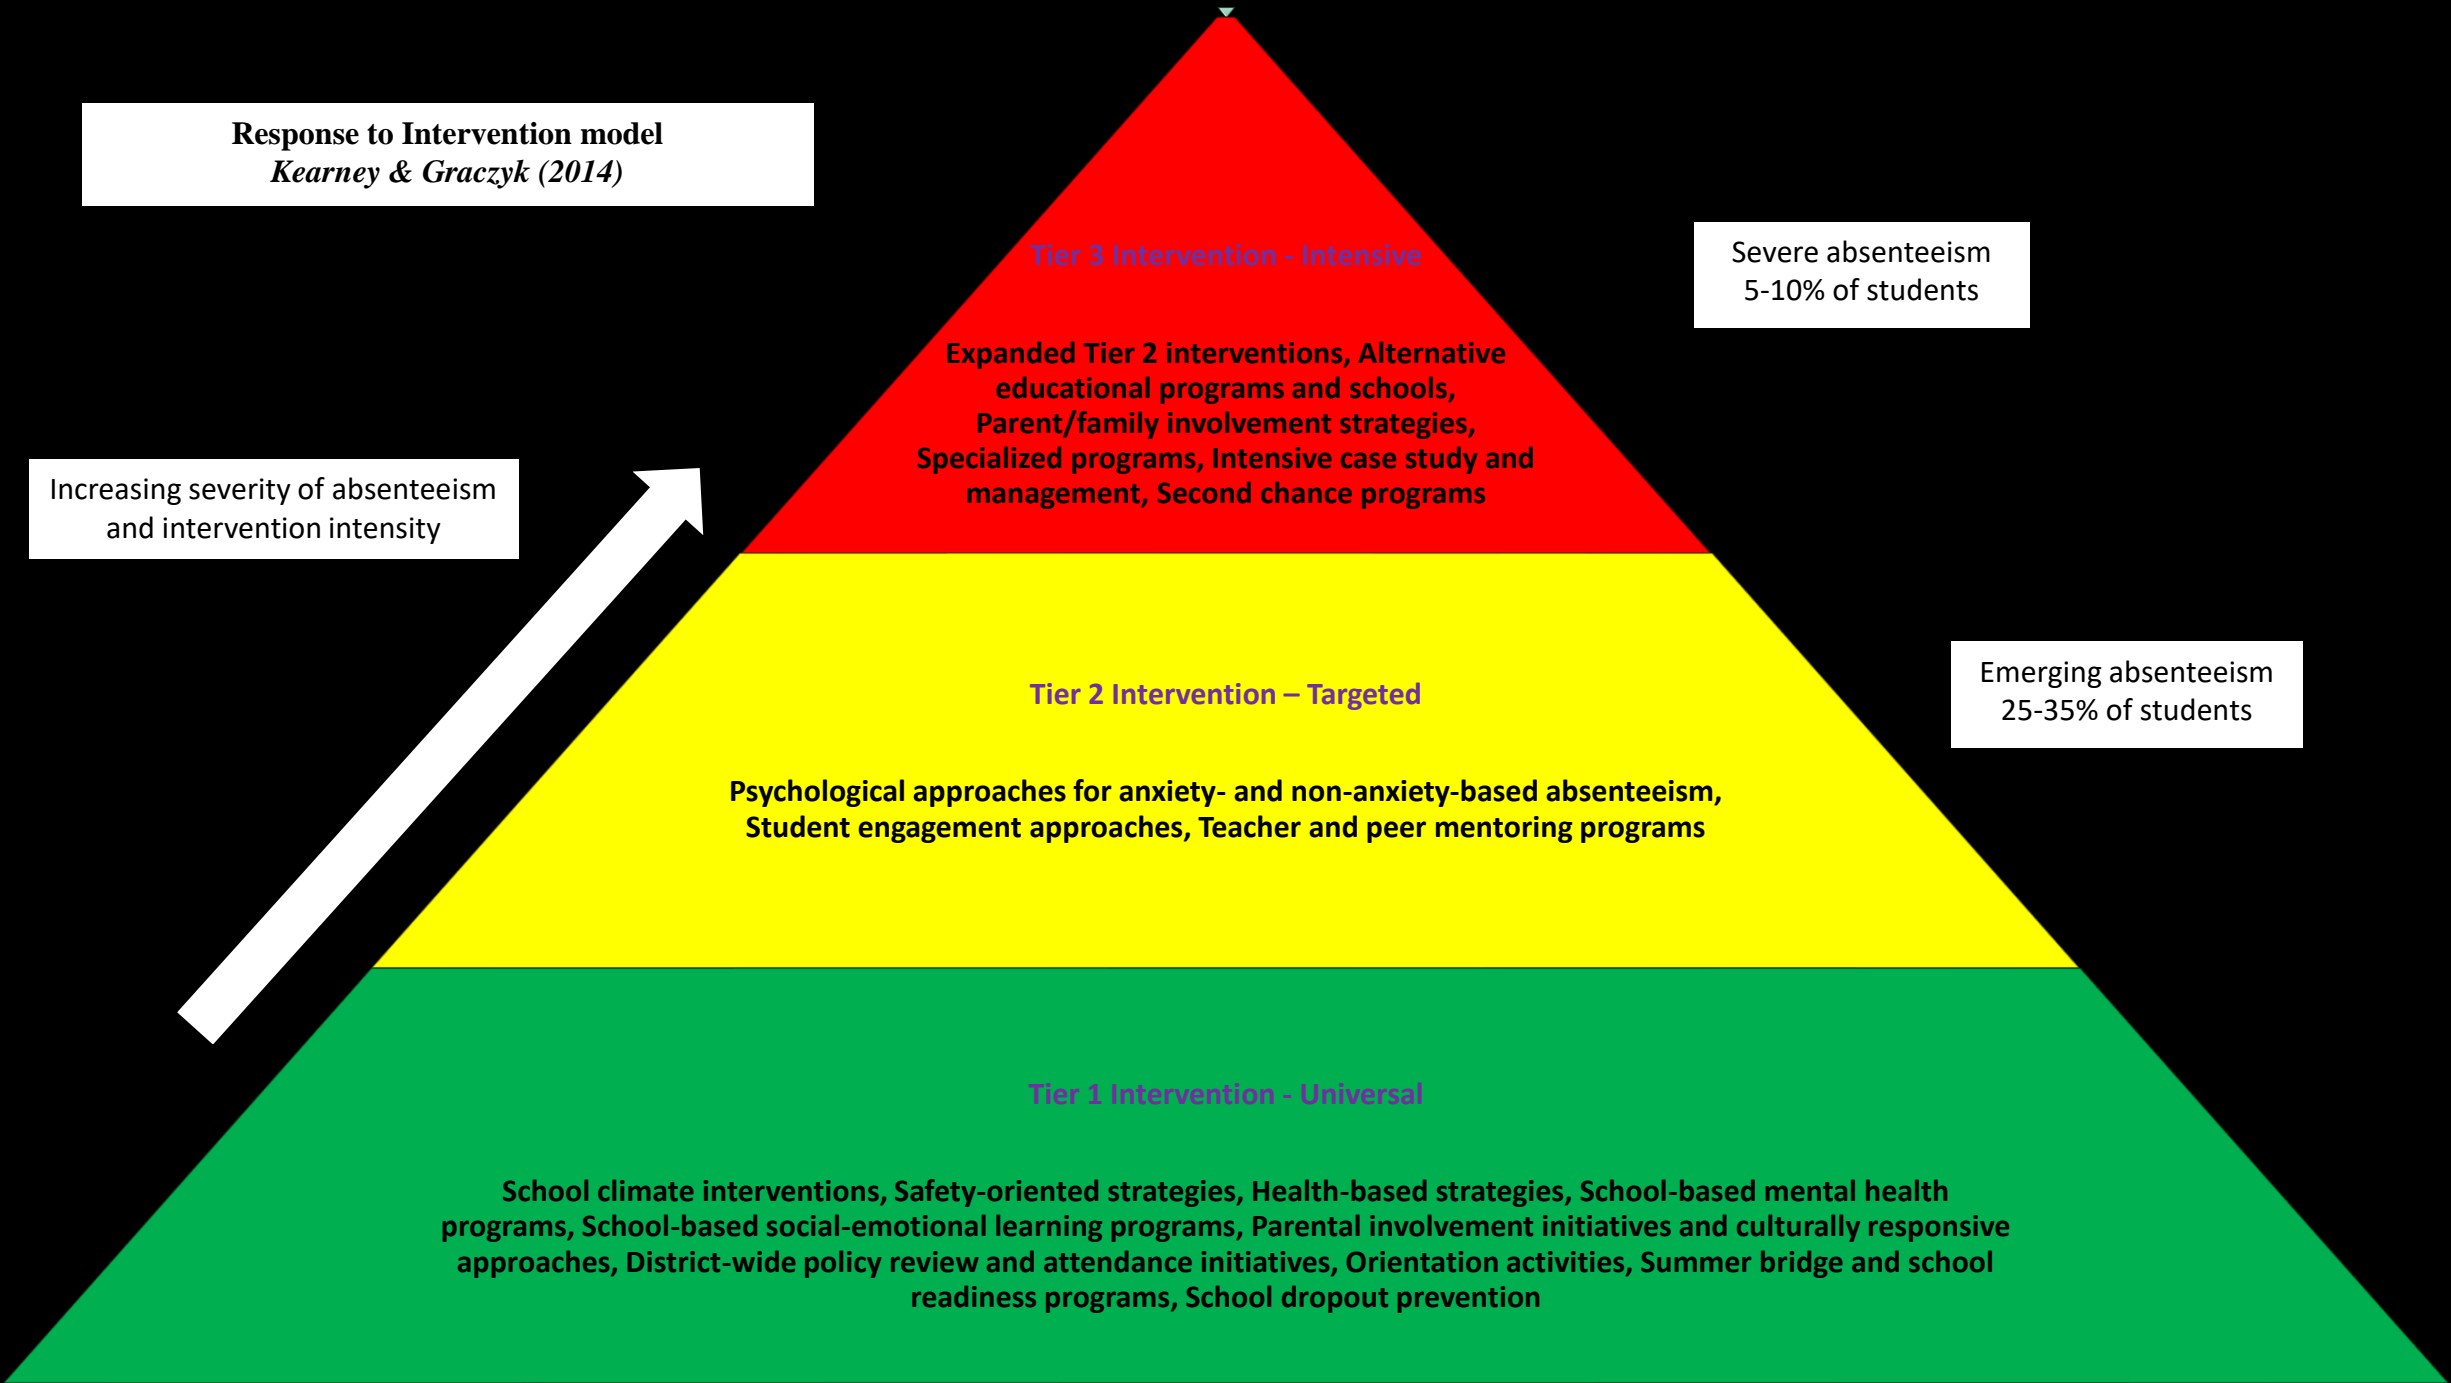

**Tier 2 Intervention – Targeted**

Psychological approaches for anxiety- and non-anxiety-based absenteeism, Student engagement approaches, Teacher and peer mentoring programs

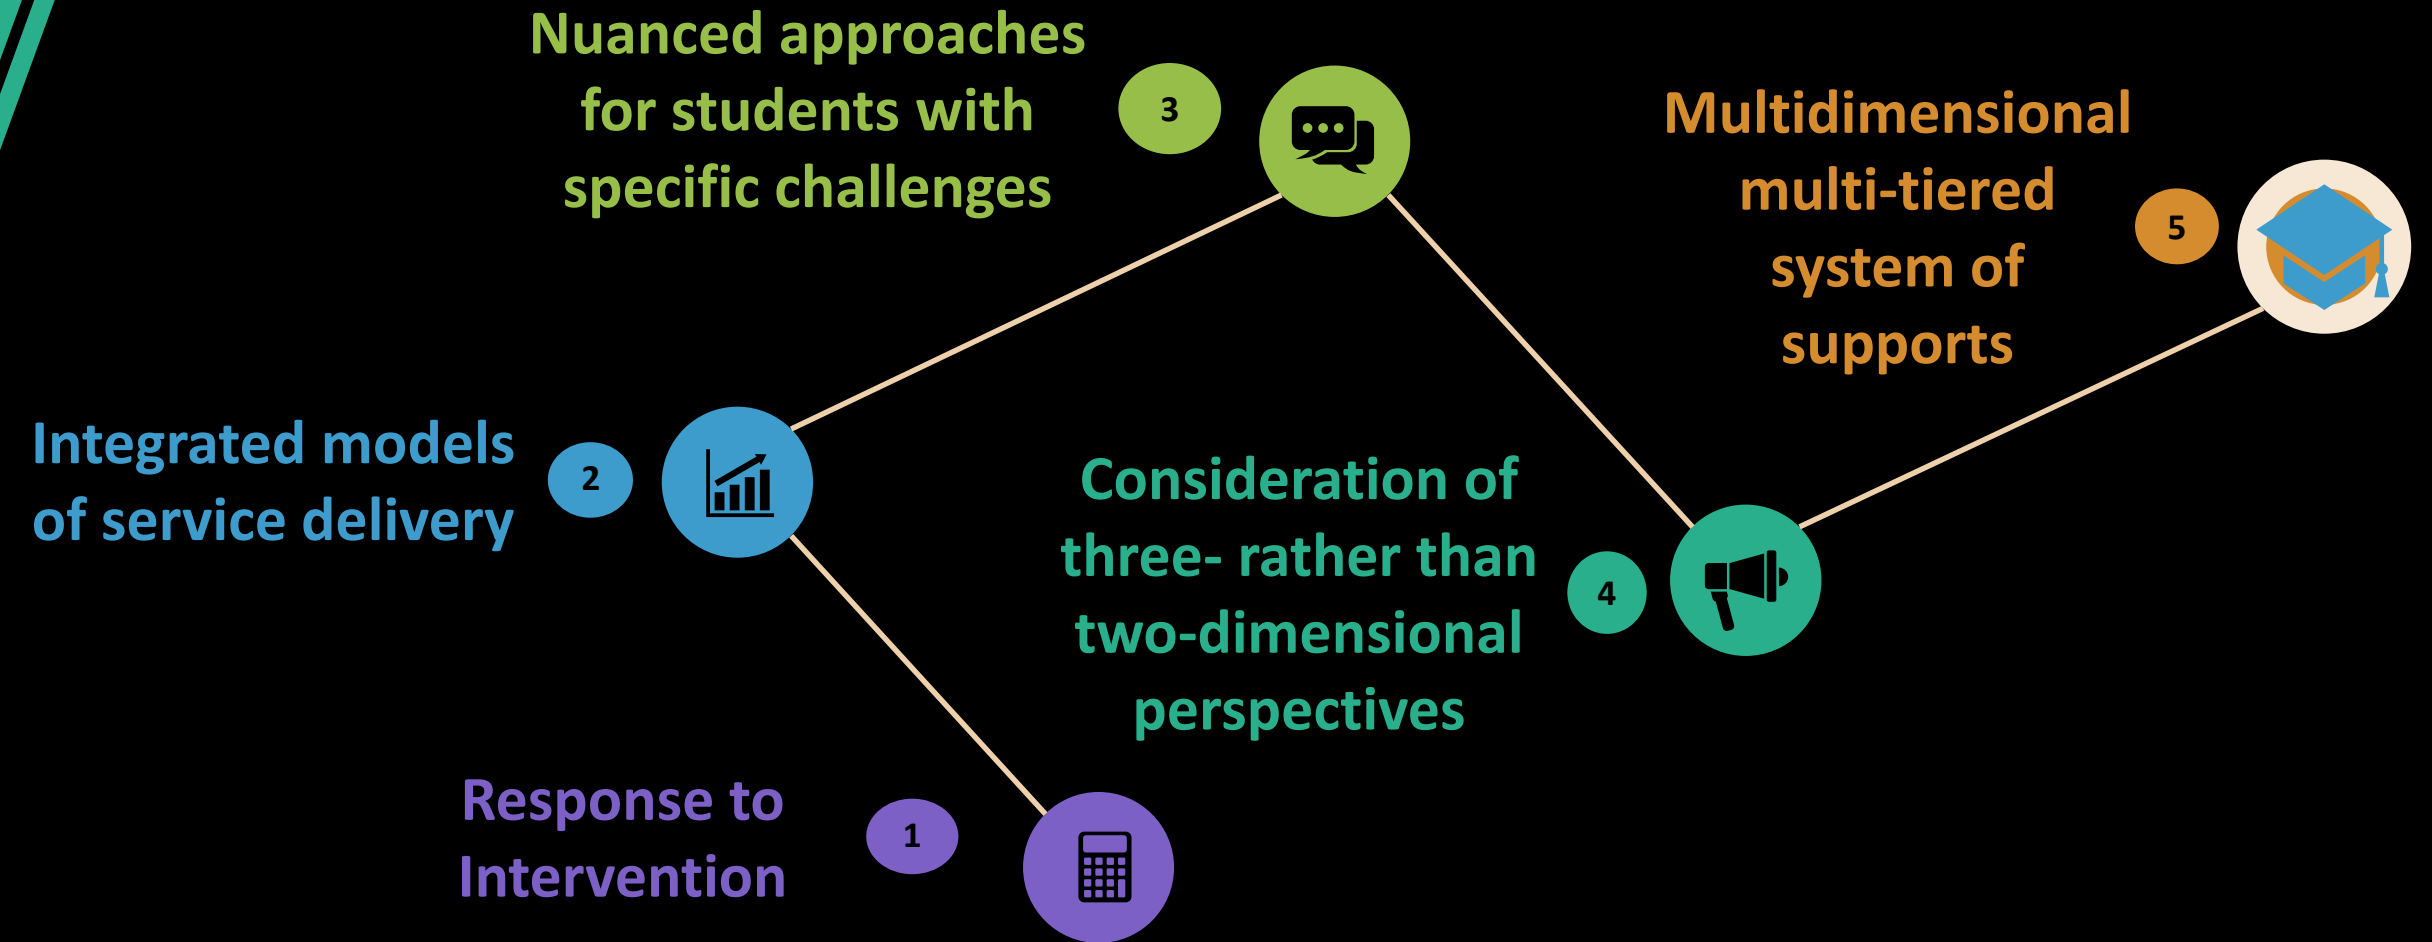

Emerging absenteeism  
25-35% of students

**Tier 1 Intervention - Universal**

School climate interventions, Safety-oriented strategies, Health-based strategies, School-based mental health programs, School-based social-emotional learning programs, Parental involvement initiatives and culturally responsive approaches, District-wide policy review and attendance initiatives, Orientation activities, Summer bridge and school readiness programs, School dropout prevention

# Over the last few years...

# MTSS multidimensional pyramid model

*Kearney & Graczyk (under review)*

*Kearney, González, Graczyk, & Fornander (2019)*

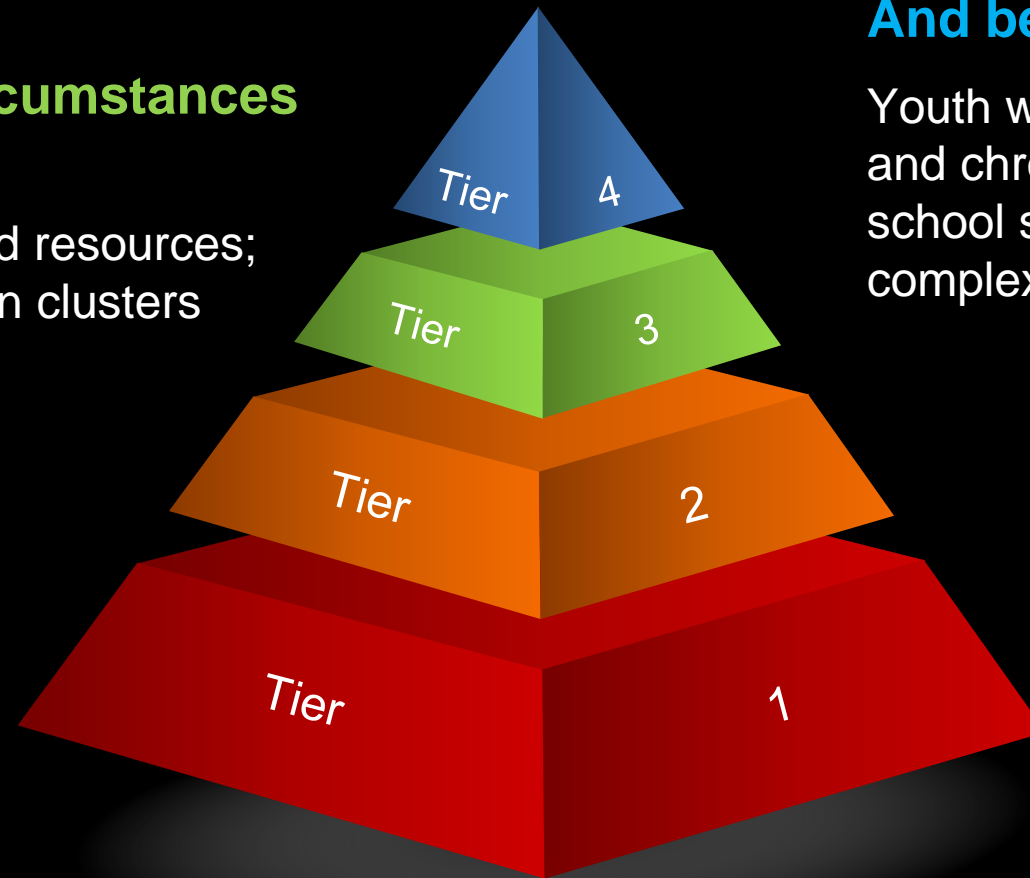

*Kearney, González, Graczyk, & Fornander (under review)*

## Adaptations to unique circumstances

Crafting upper tiers to local requirements, set points, and resources; application to various domain clusters

## Early actions

Development of effective and nuanced assessment and early warning systems and intervention strategies

## And beyond

Youth with extremely severe and chronic absenteeism, school stayout/dropout, and/or complex psychopathology

## Emphasis on prevention

Initial, strong, and outsized emphasis on preventative practices no matter the domain that is addressed

# Sample domain clusters

## Typology domains

School refusal  
Truancy  
School withdrawal  
School exclusion

## Functional domains

Avoidance of negative affectivity  
Escape aversive social/evaluative situations  
Attention-seeking  
Pursuit of tangible reinforcement

## School level domains

Preschool  
Elementary school  
Middle school  
High school

## Severity domains

Low severity  
Moderate severity  
High severity

## Ecological level domains

Chronosystem  
Macrosystem  
Exosystem  
Mesosystem  
Microsystem

# Typology domains

Practical universal screening practices, checklists, school-based prevention programs for emotional disorders and externalizing behavior problems; parent involvement strategies; LEA review of exclusionary discipline practices; anti-bullying

Adaptations of clinical protocols for school settings, including anxiety management techniques, exposure-based practices, social and coping skills training; family interventions and parenting skills training, contingency management

Arrest diversion, in-school suspension, school-based community service, restorative systems including mentoring and academic remediation; frequent parent conferencing; family-oriented social service provision and integration

# Functional domains

## Tier 1

Schoolwide assessment of antecedents to problem behavior, functional analysis of emerging school attendance problems

## Tier 2

Differential selection and implementation of social and behavioral interventions for individual students depending on what motivates a behavior

## Tier 3

Intensive assessment to identify setting events, replacement behaviors, areas of environmental change, and broader academic, social service, and family support needs

# School level domains

Attendance data as an early warning indicator, improve parent social capital and provide extra supports, and form school-community partnerships to address broader social issues

**Preschool**

Social-emotional competency development, parent education, schoolwide incentives, monitoring with mentoring, removal of barriers to school attendance

**Elementary school**

School engagement practices, school-based mentoring and capacity development, early warning implementation

**Middle school**

Modification of schoolwide approaches toward small team structures, more active student participation, and a stronger communication system; school completion in some form; adult readiness

**High school and beyond**

# Severity domains

## Low absenteeism severity

Early warning systems with a focus on more specific variables

## Moderate absenteeism severity

Blending of educational and juvenile justice lenses

## High absenteeism severity

Algorithms of broader variables to identify highest risk, modification of tiered service delivery perspective

# High absenteeism severity

*Kearney & Graczyk (under review)*

*Kearney, González, Graczyk, & Fornander (2019)*

*Kearney, González, Graczyk, & Fornander (under review)*

## Tier 3

Primary emphasis  
on full-service  
community schools

## Tier 2

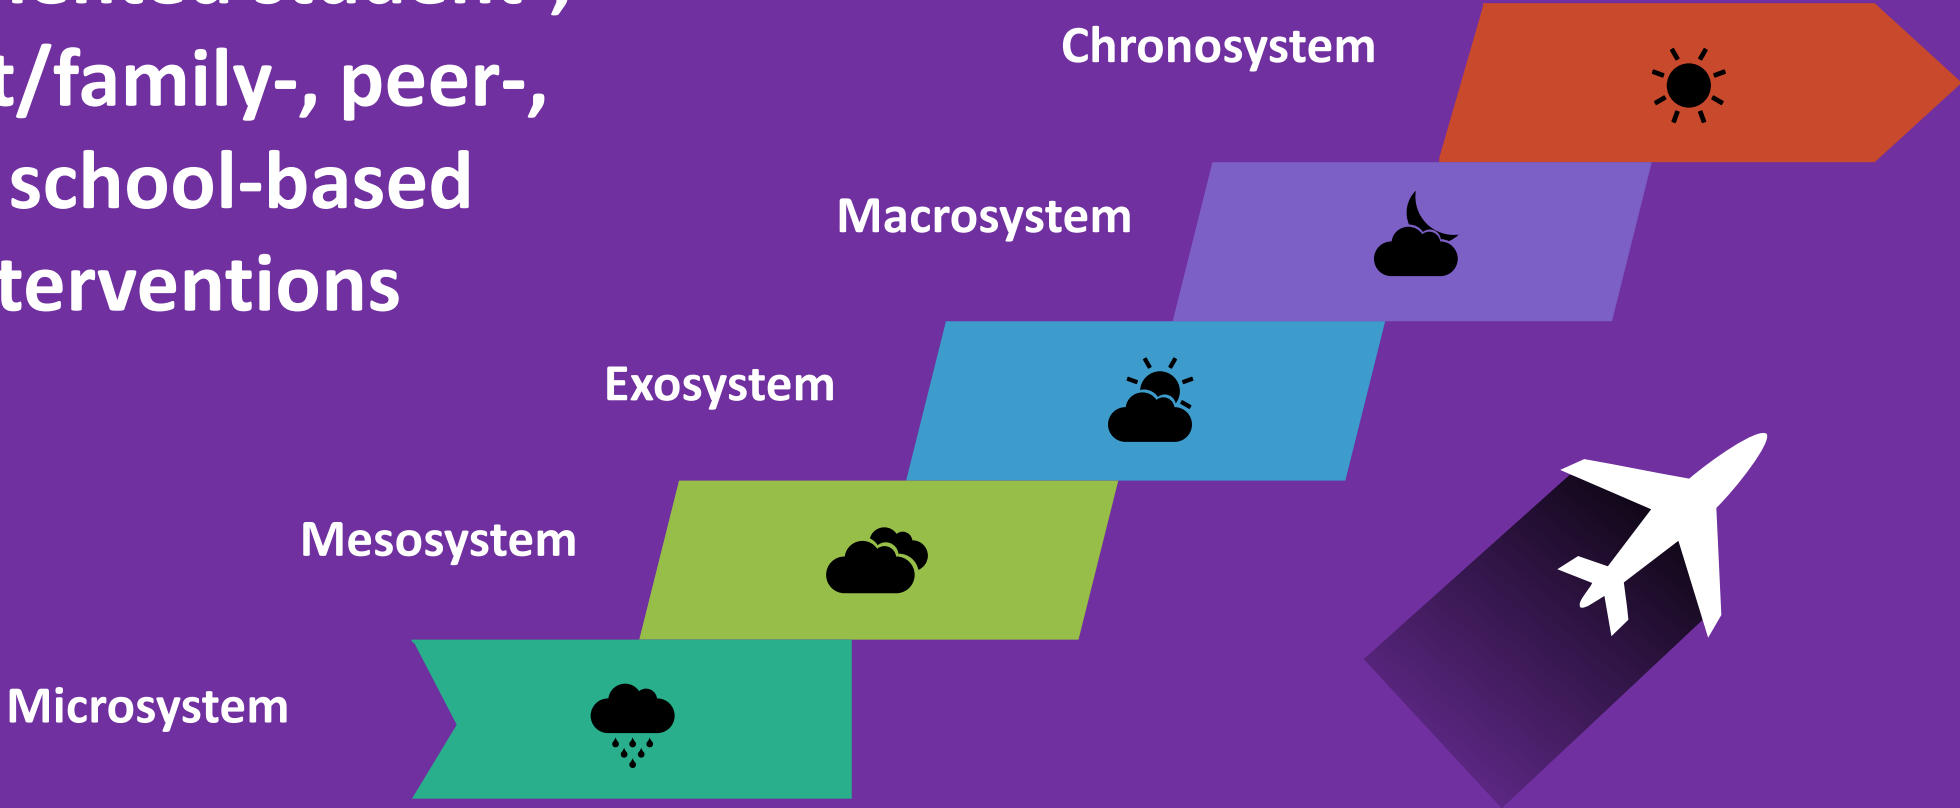

More reluctance to  
intervene with lower level  
offenders

## Tier 1

Modified focus and  
allocation of  
resources

# Ecological level domains

Tier-oriented student-,  
parent/family-, peer-,  
and school-based  
interventions

# Demarcating the tiers?

- Skedgell & Kearney (2018)
- Fornander & Kearney (under review)
- Fornander & Kearney (2019)
- Kearney & Bacon (in development)
- Kearney & González (in development)

## Absenteeism severity levels

1+%, 3+%, 5+%, 10+%,  
15+%, 20+%, 30+%,  
40+%

Demographics  
and academics

Internalizing  
symptoms

Family  
environment

School  
climate

# Family environment

Achievement orientation, active-recreational orientation, cohesion, expressiveness, conflict

## Academics

Individualized education plan eligibility, grade point average, grade level

## Demographics

Ethnicity, age, gender

## Internalizing symptoms

Lack of enjoyment; anxiety levels

## School climate

Good education, like my school, bullying, parent involvement, school involves parents, diversity, safety procedures, if absent/notice?

# Themes for integrating all the puzzle pieces

Expanding outreach  
globally

Informing different  
perspectives

Adaptations to future  
changes in education and  
technology

Accounting for high-  
intensity situations

Implementation  
science

Thank You!
